

LASER MEDICINE TO CURE SEEMINGLY INCURABLE DISEASES

© 2005 Dr. Prakash B. Katariya, Laser Cure Clinic, Pune, India www.ayurvedashram.com

The following Conditions have been successfully treated using Low Level Laser Therapy by **Dr. Prakash B. Katariya** and other Doctors, in the **Laser Cure Clinic**, Pune, India

1. Hypertension

The conventional system of medicine believes that there is no permanent cure for essential hypertension, and therefore everyday pills are prescribed. These drugs are for temporary relief with serious side effects like decreased libido or increasing asthmatic attacks or allergic manifestation. As an alternative, laser therapy offers near permanent normalization of blood pressure without any such side effects.

2. Psoriasis

Psoriasis is an autoimmune disease. It is labeled as incurable in allopathic medicine. We conducted research on laser therapy for psoriasis and we say very scientifically with our experience on large number of patients that psoriasis is very much curable and easily curable in almost all cases.

3. Asthma

80 to 90 % asthma attacks can be prevented in almost all asthma patients. Asthma and all allergic disorders like allergic rhinitis, allergic dermatitis, and allergic sinusitis are very effectively treated by laser medicine. The laser therapy offers to all these patients long-term relief from asthma. Laser medicine can reverse steroid dependence too. We have treated many doctors like Dr. Muzumdar and patients of asthma.

4. Hypothyroidism

Do not disturb your hormonal orchestra by taking thyroid extract tablets. Hypothyroidism can be treated by laser therapy alone. Just few minutes laser beam can sort out this difficult problem without any internal medicine.

5. Diabetes Mellitus

Diabetes is curable, in good percentage of cases.

(a) Type I Diabetes Mellitus

Here Laser therapy offers reduction of dosage in insulin to the extent of 50% to 100% and reduction in frequency of insulin injections. In short fewer and lesser dosage of insulin will be required if the diabetic patient is receiving laser therapy. Most importantly, the complications of diabetes are very effectively treated with laser therapy, whenever conventional medicine fails to treat them.

(b) Type II Diabetes Mellitus

Depending on severity, the laser medicine can offer partial to total reduction of anti

diabetic drugs and still exerts much better control over diabetes.. We have been doing clinical research on laser therapy and diabetes.

6. Migraine

Laser Therapy can cure good percentage of migraine cases for ever
Laser therapy can be a drugless and easy cure for many more patients of migraine.
Within few visits the intensity and frequency of migraine is dramatically reduced.
The results are quite long lasting and near permanent.

7. TIA (Mini Stroke)

Treat TIA with great zeal, to avoid stroke and laser therapy is the best option.
Transient Ischemic Attack is called as "mini stroke", they should be treated with all zest to avoid full-fledged brain stroke. Laser therapy seems to be best and fastest to relieve TIA and it also ensures excellent prophylaxis against brain stroke.

8. Peripheral Vascular Disease(PAD)

Laser therapy is the treatment of choice in peripheral vascular disease
The presenting symptom of this disease is inability to walk, numbness, gangrene, etc. Laser therapy can show its magic just in few weeks time.

9. IBS (Irritable bowel syndrome)

Laser therapy acts quite speedily on IBS and soon the patient is symptom free without reoccurrence of symptoms over the years.

10. Paresis & Paralysis

Paresis and paralysis can be treated by Laser Therapy with a very good success. A number of people who were unable to walk or unable to do certain physical movements over years have been very satisfactorily improved. We could make our patients walk after a few years of inability to walk. LLLT can reverse most of the damage done by stroke.

11. Hearing loss and Tinnitus

For enhancing natural hearing laser therapy is a superior and inexpensive option if compared with costly and inferior cochlear implants, or expensive hearing aids. The vertigo or difficulty in balancing can also be corrected.

12. Rheumatoid Arthritis

One must think of laser therapy before taking hazardous drugs like methotrexate and steroids. .Within a few weeks of laser therapy joint mobility is increased & swelling decreased with improvement in all the parameters like ESR and Platelet count.

13. Osteo Arthritis(OA)

Knee replacement (TKR) is not required in 50 % of the cases
Laser therapy can rebuild the cartilage, It can normalize synovial secretions and exerts a reparative impact on the joint structures Therefore the changes in the Osteo-arthritic joints are reversed and the patient is relieved with out any internal medicine and reoccurrence.

14. Gout

Laser therapy increases clearance of uric acid through more efficient kidney functioning and therefore gout becomes curable without internal medicine and reoccurrence. We feel that LLLT is the most superior option for Gout.

15. Severe (Chronic /Acute) Backache:

Laser Therapy is the most effective in resistant cases of backache; therefore you must try it before spine surgery. Laser therapy is effective in the resistant cases of backache and sciatica. Reparative action of laser beam on the spine and the disc reverses the changes of degeneration.

16. Sexual Problems

Restoration of youthful sexual capacity is not a dream in the light of our research. The Laser therapy is very effective in restoring the coital capacities, reversing diabetic impotence, impotence caused by drugs (like blood pressure reducing drugs, heart drugs), impotence due to aging, and treating premature ejaculation. Even the normal male can take it for enhancing his coital capabilities.

17. Other diseases:

Motor neuron disease, neuralgia, neuritis, Parkinson's, Sciatica, any type of pain, prostatitis, urethritis, bronchitis, various beauty problems, Calcaneal spurs, peptic ulcers, cervical erosions, acidity, chronic appendicitis, sport injuries.
